Video converter for iPad I have a media library of 600 audio visual video files, most are files that are duplicates of files that are in one location on my computer, meaning that if i search for the first file of the first audio visual video, the software finds the duplicates file in my computer, the question is: can I do this with mp4 files? Can I do this with MP4 files? Can I copy the MP4 files from my PC to my iPad?I have already tried Handbrake and Handycam but they only convert one MP4 file at a time and i need to do the process for several hundreds of MP4 files.
